

Grooper™ 2.5

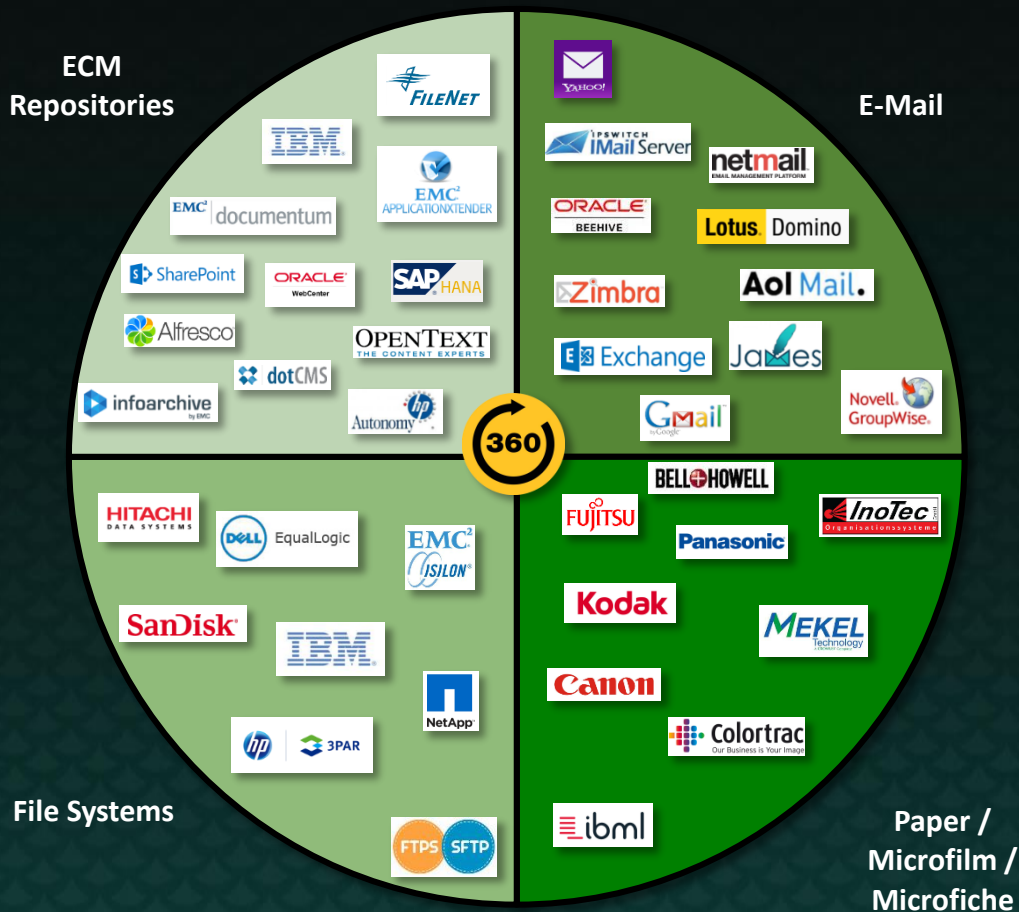

Today the world of content accessibility is viewed from a one dimensional perspective – scanned paper or micromedia documents.

- Paper documents represent a shrinking percentage of document content.
- A majority of document-based content is already in electronic form.
- Historically, no tools were effective to import, export and process electronic documents.
- The population of documents the world has been able to access and perform tasks on has been small.

Grooper™ 2.5

Grooper 2.5 brings an industry leading 360° visibility with universal access to documents content across all major content storage platforms.

Seamless handling of all major electronic document formats
