

# HOW TO REDUCE INFORMATION PROCESSING COSTS BY ONE THIRD

According to S&P reports, **operating costs** at banks and credit unions are **catching up to revenue**. Achieving efficiency gains while balancing regulation and profitability is today's challenge.

And there's proof that meeting this challenge head-on with technology-based optimizations **reduces costs by 30%**<sup>§</sup> – without sacrificing growth!

Traditional approaches to efficiency like reducing headcount and funneling cash into IT aren't nearly as effective as automating document-based processes and data integration workflows.

## U.S. BANK COSTS RISING FASTER THAN REVENUE (IN BILLIONS)\*

**MINI CASE STUDY:** A large national financial institution used Grooper to improve document and data processes by **37.5 percent**.

The institution uses Grooper to **intelligently process information workflows**. They collect and integrate data from member documents, direct deposit forms, loan files, and mortgage documents. Electronic document handling technology ensures that documents and metadata remain compliant as they move error-free between repositories and line-of-business applications.

The **efficiency** gain over previous systems returned **three hours a day per employee**. Because Grooper processes any type of paper or digital record, staff members are set free from error-prone “stare and compare” work to **focus on more critical initiatives** like customer service and retention.

**Optimize your work with Grooper – streamline data processing, compliance, and integration workflows while reducing costs and increasing customer satisfaction.**

## 37.5% TIME SAVED IN FINANCIAL DOCUMENT PROCESSING
